Allergen FlowThrough™ LFD

Onsite FOOD & SWAB tests

BETTER TESTS
Better decisions

Introducing better ways to improve your validation and verification of Allergen controls in food manufacture & catering

All food businesses have a responsibility to know which allergens are present in the foods they sell or serve to ensure they are correctly labelled or declared. They must do everything possible to avoid cross contact, especially when they do not have dedicated facilities. They must have documented risk assessment systems to identify routes of cross contact and controls to mitigate the risks from food allergens.

To ensure controls are effective it is usually necessary to initially validate and routinely verify their effectiveness with an appropriate level of testing – this can be performed now using Allergen FlowThrough™ LFD onsite Food & Swab tests.
